PT Nucleic acid encoding new potassium channel designated TWIK-1 -
PT useful for treating channel deficiency diseases, screening for
PT active agents and for diagnosis
XX

PS Claim 12; Figure 1b; 37pp; French.
XX
CC The present sequence represents a protein comprising a potassium channel
CC with the properties of a TWIK (Tandem of P domains in a Weak Inward
CC rectifying K+)-1 channel. This is the first member of a new family of
CC channels consisting of 4 transmembrane segments and two P domains, and
CC being only weakly rectifying. The cDNA, vectors, the cells expressing
CC TWIK-1 type channels and the protein are used to compensate
CC for deficiency of potassium channels in various tissues. Compounds
CC for modulating activity of TWIK-1 type channels may also be useful
CC therapeutically, e.g. for control of epilepsy, arrhythmia, vascular
CC disease, neurodegeneration (particularly of ischaemic or anoxic origin),
CC endocrine or muscular disorders. The cDNA and the vectors can also be
CC used to create transgenic animals (especially knock-out animals) for use
CC as models of TWIK-1 related diseases. Analysis of the sequence of the
CC TWIK-1 gene may be used for pre-natal diagnosis of disease. Antibodies
CC can be used to detect TWIK-1 channels and for inhibiting or activating
CC the channels in vivo.

PT New nucleic acids encoding mammalian K+Hnov potassium channel
PT proteins, useful for the diagnosis and treatment of episodic ataxia
PT with myokymia, cardiac arrhythmia, epilepsy and Bartter's syndrome
XX
PS Claim 3; Page 101-102; 112pp; English.
XX
CC This sequence represents the human K+Hnov49 potassium channel.
CC K+Hnov proteins have a high degree of homology to known potassium
CC channels and may be alpha subunits, which form the functional channel, or
CC accessory subunits that act to modulate the channel activity. K+Hnov49 is
CC a 4 transmembrane domain, 2 pore domain potassium channel. The gene's
CC chromosomal location is 1q41, determined via PCR chromosomal
CC localisation using primers Z11937 and Z11938. K+Hnov cDNAs
CC were isolated by extension of expressed sequence tags (ESTs) which were
CC related but not identical to known human potassium channels. Potential
CC polymorphisms detected as sequence variants between multiple
CC independent clones. Potassium channels have critical roles in various
CC cell types and biochemical pathways. Defective potassium channels are
CC known to cause four human diseases: episodic ataxia with myokymia;
CC cardiac arrhythmia (long QT syndrome); epilepsy; and Bartter's syndrome.
CC As potassium channels are critical components of virtually all cells,
CC it is likely that abnormal potassium channels are also implicated in
CC certain renal, cardiovascular and central nervous system (CNS) disorders.
CC Nucleotides encoding K+Hnov proteins may be used for identifying
CC homologous or related proteins and the DNA sequences encoding them. They
CC may be used to produce compositions that modulate the expression and
CC function of the K+Hnov protein and in studying the biochemical pathways
CC associated with it. They may also be used for the recombinant production
CC of K+Hnov protein in fermentation cultures. Additionally, such
CC nucleotides may be used in gene therapy protocols for the treatment
CC of diseases associated with abnormal potassium channels.

PT   New human polypeptides useful for diagnosing and treating cerebral
PT   and cardiac ischemias
XX
PS   Claim 1; Page 18-20; 21pp; English.
XX
CC   This invention describes a novel human Twik-1 Related K+ channel-2
CC   (hTREK-2) polypeptide (I) and its encoding nucleic acid (II) which has
CC   vasotropic, antiinflammatory and analgesic activity. (II) or agonists of
CC   (I) may be used to stimulate production of (I) in vivo to treat patients
CC   requiring enhanced activity or expression of (I). This use of (II)
CC   represents a gene therapy regime. Antagonists of (I), the complement of
CC   (II) used as an antisense construct or a polypeptide competitor of (I)
CC   may be administered to patients to inhibit activity or expression of (I).
CC   Detection of the presence or amount of (I) in a sample from a patient or
CC   detection of mutations in (I) may be used to diagnose or measure
CC   susceptibility to diseases related to altered expression or activity of
CC   (I). The diseases and conditions resulting from altered activity or
CC   expression of (I) which may be treated as above include cerebral,
CC   cardiac and renal ischemias, brain and cardiac diseases, inflammation
CC   and pain. In addition, (I), (II), and agonists and antagonists of (I)
CC   may be used to mimic or antagonize the effects of endogenous
CC   neurotransmitters and hormones. (II) or its fragments may be used as
CC   hybridization probes to isolate full length and genomic cDNAs encoding
CC   (I) or its homologues from cDNA or genomic libraries. (II) may also be
CC   used for chromosome mapping and linkage analysis to identify the
CC   relationship between genes and diseases which have been mapped to the
CC   same chromosome. In addition (II) may be used to identify mutations
CC   associated with diseases by comparing the sequence of (II) between
CC   affected and unaffected individuals. (I) or its fragments may be used as
CC   immunogens to produce antibodies against (I). Antibodies to (I) may be
CC   used to isolate or identify clones expressing (I) or to purify (I) by
CC   affinity chromatography. These antibodies may also be used to treat the
CC   above diseases as agonists or antagonists of (I).

XX
PS   Claim 4; Fig 1A-C; 53pp; English.
XX
CC   The present sequence represents a protein, designated KT4, which is a
CC   member of the TWIK family 2PD potassium channel polypeptides. These
CC   polypeptides contain two potential P-domains and 8 (preferably 4)
CC   transmembrane domains. The KT4 cDNA sequence was isolated from a brain
CC   cDNA library using degenerate oligonucleotides derived from human
CC   expressed sequence tag (EST) AA604914. The polypeptides and
```

```
CC   polynucleotides are used in the diagnosis, prevention and treatment of
CC   disease states. The polynucleotides may be used to detect and
CC   quantitate expression of TWIK family 2PD potassium channels, and
CC   aberrant or mutant forms of the polynucleotide which cause various
CC   diseases and disorders. Antisense oligonucleotides may be used to
CC   modulate the expression of polynucleotides of the invention. The
CC   polypeptides are used for treating diseases and disorders associated
CC   with ion channel dysfunction, including renal, musculoskeletal and
CC   proliferative diseases, e.g. renal failure, nephrosis, cirrhosis,
CC   dysphagia, gastritis, myotonias, muscular dystrophy, atherosclerosis
CC   and cancers.

PT   Novel human potassium channel polynucleotides and polypeptides used in
PT   the diagnosis, prevention and treatment of diseases including renal
PT   failure, cirrhosis, muscular dystrophy and cancers -
XX
PS   Claim 7; Fig 3A-C; 53pp; English.
XX
CC   The present sequence represents a protein, designated KT5, which is a
CC   member of the TWIK family 2PD potassium channel polypeptides. These
CC   polypeptides contain two potential P-domains and 8 (preferably 4)
CC   transmembrane domains. The KT4 cDNA sequence was isolated from a brain
CC   cDNA library using degenerate oligonucleotides derived from human
CC   expressed sequence tag (EST) AA533124. The polypeptides and
CC   polynucleotides are used in the diagnosis, prevention and treatment of
CC   disease states. The polynucleotides may be used to detect and
CC   quantitate expression of TWIK family 2PD potassium channels, and
CC   aberrant or mutant forms of the polynucleotide which cause various
CC   diseases and disorders. Antisense oligonucleotides may be used to
CC   modulate the expression of polynucleotides of the invention. The
CC   polypeptides are used for treating diseases and disorders associated
CC   with ion channel dysfunction, including renal, musculoskeletal and
CC   proliferative diseases, e.g. renal failure, nephrosis, cirrhosis,
CC   dysphagia, gastritis, myotonias, muscular dystrophy, atherosclerosis
CC   and cancers.

PT   New mechanically sensitive potassium channel, used to screen for
PT   specific modulators, potential therapeutic agents for heart and nervous
PT   system disorders -
XX
PS   Claim 2; Fig 1; 40pp; French.
XX
CC   The present sequence represents a mechanically sensitive potassium
CC   channel protein designated TRAAK. The protein is activated by
CC   polyunsaturated fatty acids, particularly arachidonic acid, and by
CC   riluzole. The protein is used to screen for specific modulators which
CC   are useful for treating or preventing diseases of the heart and nervous
CC   systems in humans and animals, e.g. epilepsy, cardiovascular disease
CC   (arrhythmia), neurodegeneration (particularly where associated with
CC   ischemia or anoxia), abnormalities of hormone secretion and muscular
CC   disease. The protein itself may be used to treat these diseases.
CC   Antibodies specific for the protein are used to detect it in tissues,
CC   also as therapeutic inhibitors or activators.

PT   New nucleic acids encoding mammalian K+Hnov potassium channel
PT   proteins, useful for the diagnosis and treatment of episodic ataxia
PT   with myokymia, cardiac arrhythmia, epilepsy and Bartter's syndrome
XX
PS   Claim 3; Page 104-105; 112pp; English.
XX
CC   This sequence represents the human K+Hnov59 potassium channel.
CC   K+Hnov proteins have a high degree of homology to known potassium
CC   channels and may be alpha subunits, which form the functional channel, or
CC   accessory subunits that act to modulate the channel activity. K+Hnov59 is
CC   a 4 transmembrane domain, 2 pore domain potassium channel. The gene is
CC   located on chromosome 19, determined via PCR chromosomal
CC   localisation using primers Z11939 and Z11940. K+Hnov cDNAs
CC   were isolated by extension of expressed sequence tags (ESTs) which were
CC   related but not identical to known human potassium channels. Potential
CC   polymorphisms detected as sequence variants between multiple
CC   independent clones. Potassium channels have critical roles in various
CC   cell types and biochemical pathways. Defective potassium channels are
CC   known to cause four human diseases: episodic ataxia with myokymia;
CC   cardiac arrhythmia (long QT syndrome); epilepsy; and Bartter's syndrome.
CC   As potassium channels are critical components of virtually all cells,
CC   it is likely that abnormal potassium channels are also implicated in
CC   certain renal, cardiovascular and central nervous system (CNS) disorders.
CC   Nucleotides encoding K+Hnov proteins may be used for identifying
CC   homologous or related proteins and the DNA sequences encoding them. They
CC   may be used to produce compositions that modulate the expression and
CC   function of the K+Hnov protein and in studying the biochemical pathways
CC   associated with it. They may also be used for the recombinant production
CC   of K+Hnov protein in fermentation cultures. Additionally, such
CC   nucleotides may be used in gene therapy protocols for the treatment
CC   of diseases associated with abnormal potassium channels.

PT   New two pore potassium channel used for, e.g.  treatment of cancer,
PT   pulmonary, cardiovascular and inflammatory diseases
XX
PS   Claim 3; Page 24; 44pp; English.
XX
     This sequence is the h-TREK1 polypeptide, encoded by the h-TREK1
     polynucleotide Z00039. h-TREK1 is a two pore potassium channel, and the
     gene maps to human chromosome 1q32, between the markers D1S237 and
CC   WI5105. The polynucleotide sequence of h-TREK1 can be used to diagnose a
CC   disease or susceptibility to a disease related to expression or activity
CC   of h-TREK-1 polypeptides. The methods of diagnosis may be used in the
CC   treatment of diseases including cancer, pulmonary, cardiovascular, and
CC   inflammatory diseases, pain, psychiatric disorders including depression
CC   and schizophrenia, neurodegenerative diseases including Alzheimer's,
CC   stroke, and head trauma and neurological disorders including migraine.

PT   Novel isolated h-TRAAK polypeptides belonging to the potassium channel
PT   family of polypeptides, useful for the diagnosis and treatment of
PT   h-TRAAK related disorders,e.g. depression and schizophrenia -
XX
PS   Claim 3; Page 21; 35pp; English.
XX
CC   Functional genomics was used to identify h-TRAAK polypeptides and
CC   h-TRAAK polynucleotides from human tissue samples. h-TRAAK
CC   polypeptides have homology to the 2P domain potassium channel family of
CC   polypeptides. The h-TRAAK polypeptides and polynucleotides may
CC   be used in diagnostic assays for conditions related to h-TRAAK
CC   imbalance and for identifying agonists and antagonists of h-TRAAK
CC   polypeptides. The h-TRAAK polypeptides and polynucleotides may also
CC   be useful for treatment and prevention (e.g. as vaccines) of certain
CC   diseases, such as pain, psychiatric disorders including depression and
CC   schizophrenia, neurodegenerative disease including Alzheimer's, stroke
CC   and head trauma and neurological disorders including migraine and
CC   epilepsy. The present sequence is human h-TRAAK protein #1.

PT Novel isolated h-TRAAK polypeptides belonging to the potassium channel
PT family of polypeptides, useful for the diagnosis and treatment of
PT h-TRAAK related disorders,e.g. depression and schizophrenia -
XX
PS Claim 12; Pages 21 and 22; 35pp; English.
XX
CC Functional genomics was used to identify h-TRAAK polypeptides and
CC h-TRAAK polynucleotides from human tissue samples. h-TRAAK
CC polypeptides have homology to the 2P domain potassium channel family of
CC polypeptides. The h-TRAAK polypeptides and polynucleotides may
CC be used in diagnostic assays for conditions related to h-TRAAK
CC imbalance and for identifying agonists and antagonists of h-TRAAK
CC polypeptides. The h-TRAAK polypeptides and polynucleotides may also
CC be useful for treatment and prevention (e.g. as vaccines) of certain
CC diseases, such as pain, psychiatric disorders including depression and
CC schizophrenia, neurodegenerative disease including Alzheimer's, stroke
CC and head trauma and neurological disorders including migraine and
CC epilepsy. The present sequence is human h-TRAAK protein #2.

PT New mechanically sensitive potassium channel, used to screen for
PT specific modulators, potential therapeutic agents for heart and nervous
PT system disorders -
XX
PS Claim 3; Page 23-25; 40pp; French.
XX
CC The present sequence represents a mechanically sensitive potassium
CC channel protein designated TREK-1. The protein is activated by
CC polyunsaturated fatty acids, particularly arachidonic acid, and by
CC riluzole. The protein is used to screen for specific modulators which
CC are useful for treating or preventing diseases of the heart and nervous
CC systems in humans and animals, e.g. epilepsy, cardiovascular disease
CC (arrhythmia), neurodegeneration (particularly where associated with

```
CC   ischemia or anoxia), abnormalities of hormone secretion and muscular
CC   disease. The protein itself may be used to treat these diseases.
CC   Antibodies specific for the protein are used to detect it in tissues,
CC   also as therapeutic inhibitors or activators.

PT   New two pore potassium channel used for, e.g.  treatment of cancer,
PT   pulmonary, cardiovascular and inflammatory diseases
XX
PS   Claim 3; Page 26; 44pp; English.
XX
CC   This sequence is the mouse h-TREK1 polypeptide, encoded by the h-TREK1
CC   polynucleotide Z00040. h-TREK1 is a two pore potassium channel.
CC   The polynucleotide sequence of h-TREK1 can be used to diagnose a
CC   disease or susceptibility to a disease related to expression or activity
CC   of h-TREK-1 polypeptides. The methods of diagnosis may be used in the
CC   treatment of diseases including cancer, pulmonary, cardiovascular, and
CC   inflammatory diseases, pain, psychiatric disorders including depression
CC   and schizophrenia, neurodegenerative diseases including Alzheimer's,
CC   stroke, and head trauma and neurological disorders including migraine.

PT Novel human proteins having hydrophobic domains useful for treating
PT osteoporosis, Alzheimer's disease, Parkinson's disease, asthma,
PT multiple sclerosis, rheumatoid arthritis, cancer, anaemia, and stroke -
XX
PS Claim 1; Page 245-247; 351pp; English.
XX
CC This sequence represents a human protein of the invention, which has
CC hydrophobic domains. The DNA sequences can be used as a probe or as a
CC genetic marker. The protein can also be used as a marker, and to identify
CC potential genetic disorders. The DNA and protein can also be used as
CC nutritional sources or supplements. The protein exhibits cytokine, cell
CC proliferation, cell differentiation activities and induces production of
CC other cytokines in certain cell populations. The protein also exhibits
immune stimulating or immune suppressing activity. It can be used in the
treatment of various immune deficiencies and disorders, and to treat
infectious diseases caused by viral, bacterial, fungal or other
CC infections. The protein is also used for treating autoimmune disorders
CC such as multiple sclerosis, systemic lupus erythematosus, and rheumatoid
CC arthritis. It is also useful in the treatment of allergic reactions and
CC conditions such as asthma, and in immune suppression after organ
CC transplantation. The protein is useful in regulation of haematopoiesis
CC and consequently in the treatment of myeloid or lymphoid cell
CC deficiencies. It is also used in compositions for tissue growth or
CC regeneration. The protein is also used in the treatment of osteoporosis
CC or osteoarthritis and in the treatment of periodontal disease and other
CC tooth repair processes. The protein is used in the treatment of nervous
CC system disorders such as Alzheimer's disease, Parkinson's disease, and
CC Huntington's disease. They are useful for protection or regeneration and
CC treatment of lung or liver fibrosis, reperfusion injury in various
CC tissues, and conditions resulting from systemic cytokine damage. They are
CC also used for promoting or inhibiting tissue differentiation. They are
CC also used as contraceptives since they exhibit activin or inhibin related
CC activities and as a fertility inducing therapeutic. They are used for
CC treating various coagulation disorders and in treatment and prevention of
CC conditions resulting from coagulation activities e.g. myocardial
CC infarction or stroke. They also acts as receptors, receptor ligands or
CC inhibitors or agonists of receptor/ligand interactions. They are used to
CC treat inflammatory conditions such as septic shock, sepsis, ischaemia
CC reperfusion injury, arthritis, and nephritis. They can be used to
CC prevent tumours.

PT New human signal peptide-containing proteins useful in treatment,
PT prevention and diagnosis of e.g. cancer, inflammation and
PT cardiovascular disease -
XX
PS Claim 1; Page 207-208; 327pp; English.
XX
CC Z98109 to Z98242 encode Y87224 to Y87357 which represent the human
CC signal peptide-containing proteins HSPP-1 to HSPP-134. HSPPs have
CC anticancer, anti-inflammatory, antimicrobial, nootropic, hepatotropic,
CC neuroprotective, cardiovascular and antiasthmatic activities, and can
CC be used in gene therapy. HSPPs can be used to treat or prevent disorders
CC associated with decreased activity or function of HSPP. Antagonists of
CC HSPP are used to treat or prevent disorders associated with increased
CC activity or function of HSPP. Such diseases include cell proliferation
CC (including cancer), inflammation, cardiovascular, neurological,
CC reproductive or developmental disorders, (e.g. arteriosclerosis,
CC cirrhosis, psoriasis, acquired immune deficiency syndrome, anaemia,
CC asthma, Crohn's disease, microbial or other infections, congestive or
CC ischaemic heart disease, Alzheimer's, Parkinson's or Huntington's
CC diseases, schizophrenia, ovulatory defects, muscular dystrophy). HSPP
CC nucleic acids can be used for the recombinant production of HSPP, for
CC detecting HSPP in standard hybridisation and amplification assays (for
CC diagnosis and monitoring), in gene therapy, as antisense, triplex-forming
CC or ribozyme therapeutics, for detecting related sequences or genetic
CC variations, and for chromosomal mapping. HSPP are also used to raise
CC specific antibodies (Ab) and to screen for agonists and antagonists
CC (potential therapeutic agents). Ab are used to diagnose, or monitor,
CC HSPP-related diseases (in usual immunoassays), as therapeutic
CC antagonists, in competitive drug screens, and for purification of HSPP
CC from natural sources.

PT   New nucleic acids encoding mammalian K+Hnov potassium channel
PT   proteins, useful for the diagnosis and treatment of episodic ataxia
PT   with myokymia, cardiac arrhythmia, epilepsy and Bartter's syndrome
XX
PS   Claim 3; Page 67-68; 112pp; English.
XX
CC   This sequence represents the human K+Hnov2 potassium channel.
CC   K+Hnov proteins have a high degree of homology to known potassium
CC   channels and may be alpha subunits, which form the functional channel, or
CC   accessory subunits that act to modulate the channel activity. K+Hnov2 is
CC   a 4 transmembrane domain, 2 pore domain potassium channel. K+Hnov cDNAs
CC   were isolated by extension of expressed sequence tags (ESTs) which were
CC   related but not identical to known human potassium channels. Potential
CC   polymorphisms detected as sequence variants between multiple
CC   independent clones. Potassium channels have critical roles in various
CC   cell types and biochemical pathways. Defective potassium channels are
CC   known to cause four human diseases: episodic ataxia with myokymia;
CC   cardiac arrhythmia (long QT syndrome); epilepsy; and Bartter's syndrome.
CC   As potassium channels are critical components of virtually all cells,
CC   it is likely that abnormal potassium channels are also implicated in
CC   certain renal, cardiovascular and central nervous system (CNS) disorders.
CC   Nucleotides encoding K+Hnov proteins may be used for identifying
CC   homologous or related proteins and the DNA sequences encoding them. They
CC   may be used to produce compositions that modulate the expression and
CC   function of the K+Hnov protein and in studying the biochemical pathways
CC   associated with it. They may also be used for the recombinant production
CC   of K+Hnov protein in fermentation cultures. Additionally, such
CC   nucleotides may be used in gene therapy protocols for the treatment
CC   of diseases associated with abnormal potassium channels.
